

Global Airbnb Performance Dashboard

Business Insights Report

Project Summary

This dashboard analyzes Airbnb listings, hosts, cities, ratings and reviews to understand marketplace growth, customer satisfaction and seasonal demand.

Executive KPIs

- Total Listings: 279,712
- Cities Covered: 10
- Hosts: 182,024
- Property Types: 144
- Reviews: 5.373 Million

Overview Insights

1. Airbnb experienced rapid listing growth from 2011 to 2015, peaking around 2015.
2. Entire Place is the dominant property type throughout the period.
3. Growth slowed after 2016 and declined sharply around 2020–2021, consistent with global travel disruption.
4. Hotel rooms represent only a small share compared with home-based accommodations.

Ratings Insights

1. Mexico City and Rio de Janeiro achieve the highest average guest ratings (~95).
2. Communication scores are consistently the strongest rating dimension across cities.
3. Hotel rooms have the highest average price (~\$800), followed by Entire Place (~\$673).
4. Paris contributes the largest share of superhost listings among the displayed cities.

Review Insights

1. European cities (especially Paris and Rome) dominate review share from April through August, reflecting peak summer tourism.
2. Review activity shifts toward North American cities later in the year, indicating seasonal travel patterns.

Business Recommendations

- Focus marketing before peak summer months.
- Expand Entire Place inventory in high-demand cities.
- Improve lower-rated dimensions such as cleanliness where applicable.
- Encourage hosts to achieve Superhost status through incentives.

Skills Demonstrated

Power BI, DAX, Data Modeling, KPI Design, Data Visualization, Trend Analysis, Business Storytelling, Dashboard Design.

Portfolio Assessment

This is a strong intermediate-level portfolio project demonstrating business thinking rather than only visualization skills. Adding slicers, drill-through pages, and a map visual would make it even stronger.
